

Roxell FRESH COMBINATION Feed Bins

Unique design, quality construction and extra features for convenience and performance help Roxell's FRESH COMBINATION Feed Bins keep your feed fresh from top to bottom for excellent feed conversion and healthier poultry and livestock.

1

Fresh feed from top to bottom; excellent feed storage

Heavy galvanization and sturdy corrugated sheets lend strength and durability. Ladders are also sturdy and include a convenient handrail. Bins over 20 feet high also include a cage to meet OSHA standards. An optional ladder security door (left) helps prevent unauthorized access to the bin's ladder.

2

Long durability and low maintenance

Smooth feed flow and excellent workmanship, both inside and out, ensure that your Roxell bin requires very little maintenance. Our hopper door provides easy access to the inside of the bin for cleaning chores and improved biosecurity.

ROXELL[®]
REACHING FOR EXCELLENCE

3

Excellent weather protection

Extended bottom ring allows rain and other moisture to drip away from the hopper panels to keep water off the bin boot.

Bin bolts feature a built-in weather seal washer.

All bin seams are double-caulked with non-hardening sealer for maximum weather protection. Caulking is FDA approved and packaged in single beads for easy application.

4

Roxell feed bins offer locking bin lid openers

Lid can be opened and locked from the ground or from a remote location. When lid is open, it remains with its top side out, preventing moisture or debris from getting in the lid. Lid slides out of the way of feed truck boom to avoid bin damage during filling.

5

Options

Material flow control aids feed flow through the bin. (left)

30-degree roof is available on request – 40° roof is standard. (below)

Optional clear bin boot transition provides instant visibility of feed flow. (below left)
